May 2022 – Jul 2023

- Supported instructors and ensured smooth classroom operations.
- Guided students to complete team projects.

Skills: Python, Git/GitHub, Teaching

Across the Internet

LinkedIn, GitHub

Explanation:

Submission Checklist:

- Semantically correct HTML structure.
- Single-page layout with sections for education, skills, and career history.
- SEO meta tags in the head section.
- OG tags for better social media sharing.
- A favicon linked in the head section.

What (deliverable)

Build a single-page CV website using semantic HTML, with:

- Sections inside `<main>`: Skills, Education, Career History.
- Proper SEO meta tags in `<head>`.
- Open Graph (OG) tags for social sharing.
- A favicon linked in `<head>`.
- External CSS file (clean separation of structure vs. style).

Why (value)

- **Accessibility & structure:** Semantic tags help screen readers and search engines understand your content; your code is easier to maintain and style.
- **Search visibility:** SEO meta tags control snippets and reduce duplication; improves discoverability.
- **Professional sharing:** OG tags produce clean link previews (title, description, image) on LinkedIn/Twitter/Facebook → higher credibility and CTR.
- **Branding & UX:** A favicon makes your page look complete and easy to spot among tabs.
- **Future-proof:** Single page + semantic layout + external CSS makes it simple to add responsive design and print/PDF later.

How (implementation)

1. Semantic structure

`<header>`

`<h1>Your Name</h1>`

```
<address>City · <a href="tel:+84...">+84...</a> · <a
href="mailto:you@domain">you@domain</a></address>

<nav><a href="#skills">Skills</a> · <a href="#education">Education</a> · <a
href="#experience">Career History</a></nav>

</header>

<main>

<section id="skills"><h2>Skills</h2>...</section>

<section id="education"><h2>Education</h2><article>...</article></section>

<section id="experience"><h2>Career History</h2><article>...</article></section>

</main>

<footer>© 2025 Your Name</footer>
```

2. Head metadata (SEO + OG + favicon)

```
<head>

<meta charset="utf-8" />

<meta name="viewport" content="width=device-width,initial-scale=1" />

<title>Your Name – CV</title>

<meta name="description" content="CV of Your Name — CS student. Skills: Python,
HTML, Git/GitHub." />

<link rel="canonical" href="https://your-domain-or-pages/" />

<!-- Open Graph -->

<meta property="og:title" content="Your Name – CV" />

<meta property="og:description" content="CS student. Skills: Python, HTML,
Git/GitHub." />

<meta property="og:type" content="website" />
```

```
<meta property="og:url" content="https://your-domain-or-pages/" />
```

```
<meta property="og:image" content="https://your-domain-or-pages/thumb.jpg" />
```

```
<!-- Favicon -->
```

```
<link rel="icon" href="favicon.ico" />
```

```
<!-- External CSS -->
```

```
<link rel="stylesheet" href="styles.css" />
```

```
</head>
```

3. External CSS

Create styles.css; keep layout and colors there.
